SUMMARY

Computer Science and Engineering student with experience in AI, computer vision, and full-stack development; published IEEE research and built real-world intelligent systems using modern technologies.

EDUCATION

Chennai Institute of Technology

Bachelor of Engineering in Computer Science and Engineering

— CGPA: 8.01/10

Chennai, India

Expected May 2027

EXPERIENCE

Chennai Institute of Technology

Research Intern

May 2025 – Jul 2025

Chennai, India

- Engineered real-time computer vision pipelines using Python and OpenCV for automated crowd density estimation and multi-feed alert generation.
- Delivered a production-ready system whose outcomes were accepted and published at IEEE RCSM 2025.

Chennai Institute of Technology

Research Intern

Nov 2024 – Dec 2024

Chennai, India

- Designed and implemented a machine-learning anti-cheat framework to detect anomalous in-game behavioral patterns with high precision.
- Built a statistical fair-play detection module validated on real gameplay datasets, reducing false-positive flags.

PROJECTS

Real-Time Stampede Prevention System — Python, OpenCV, YOLO, Deep Learning

- Built a real-time crowd monitoring and alert system using computer vision for automated density estimation and risk detection.
- Automated crowd density estimation and risk detection across multiple camera streams.
- Research outcomes published at IEEE RCSM 2025.

FloatChat — React.js, Node.js, LangChain, FAISS, PostgreSQL

- Built an AI-powered conversational platform for oceanographic data discovery using a full-stack architecture.
- Integrated FAISS vector search and retrieval-augmented generation pipelines for context-aware responses.

Student Query Resolution Chatbot — Dify, Langflow, RAG

- Built an AI-powered academic assistant for institutional query resolution using retrieval-augmented generation.
- Implemented context-aware response pipelines that reduced dependency on manual support channels.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML, CSS

Frontend: React.js, Next.js

Backend: Node.js, REST APIs

Databases: MySQL, MongoDB, PostgreSQL

AI / LLM: RAG, Langflow, Dify, Hugging Face, Prompt Engineering

Tools: Git, GitHub, Docker, AWS, Vercel, VS Code, n8n

ACHIEVEMENTS

- **IEEE Publication (RCSM 2025):** Published *Real-Time Stampede Prevention Using Crowd Density Estimation and Alert System*.
- **Ideathon 2025:** Qualified for the Final Round.
- **LeetCode:** Rating 1535 — Solved 300+ problems — Earned 50 Days Badge (June 2025).

CERTIFICATIONS

GitHub Foundations (GitHub) • AI Agents Course (Hugging Face) • Data Science with Python (IBM) • Python Essentials 1 & 2 (Cisco Networking Academy) • MongoDB University Learning Path • Docker Foundations
